

ABSTRACT

A method for wrapping a wrapper about a floral grouping wherein the wrapper is a sleeve or sheet of material having a cinching tab or strip of bonding material or both and optionally a detaching element such as perforations for detaching a portion of the sleeve or sheet of material and a reservoir disposed in the interior space of the sleeve. The cinching tab is attached near one end of the sheet or sleeve. The cinching tab has a bonding material disposed thereon which, when the cinching tab is pulled tightly about the wrapper, causes the wrapper to be crimped and tightly bound about the stems of the floral grouping.
